

DO YOU KNOW IF YOU ARE BEING EXPOSED TO TOXIC ELEMENTS?

There are a number of elements that are toxic to the human body, interfere with its functioning and undermine health — such as mercury, lead, cadmium, aluminum, and arsenic. These toxic metals have no known physiological functions. They can be toxic to organ systems and may disrupt the balance of essential nutrients. Toxic metals and essential element status can be assessed using the TOXIC AND ESSENTIAL ELEMENTS TESTS. Available to test in Blood, Urine, Stool and Hair Elements varieties.

IN ADDITION, DEFICIENCIES OF ESSENTIAL TRACE ELEMENTS AS WELL AS EXCESSIVE AMOUNTS OF HEAVY METALS IN THE HUMAN BODY CAN CAUSE SIGNIFICANT HEALTH EFFECTS.

Results are presented in a clear, easy-to-understand report which details target ranges and graphically illustrates areas of concern. Result specific commentary is also provided.

Contact your clinician and request information on **TOXIC AND ESSENTIAL ELEMENT** testing today!
